

Microsoft® SharePoint® Modern Experience: Site Owner with Power Platform

Bridge Document for 2.0 Edition

This bridge document is written for instructors who have used Logical Operations' *Microsoft® SharePoint® Modern Experience: Site Owner with Microsoft Forms and Flow* Edition 1.0 courseware (091096) and want to quickly and efficiently identify the significant changes in the 2.0 edition of this course, which has been renamed to *Microsoft® SharePoint® Modern Experience: Site Owner with Power Platform*.

Since the release of the 1.0 Edition in 2019, Microsoft has made numerous changes in SharePoint, necessitating significant changes to the course. To take best advantage of the need to re-align the material with the SharePoint technical environment, we used the update as an opportunity to make other improvements, such as simplifying the course setup procedures and more closely simulating a real workgroup environment in the course activities.

Overview of Changes

In the new *Microsoft® SharePoint® Modern Experience: Site Owner with Power Platform* course:

- Activities and other content have been updated to reflect changes in SharePoint and Microsoft 365 and new terminology.
- New slides have been created with a wide screen layout, more graphics and color, and all-new content.
- The initial environment configuration used in the course has been greatly simplified to make course setup tasks much easier and faster to perform, reducing the course setup instructions from nearly 15 pages down to less than two.
- Coverage of list and library basics has been removed from this course and replaced with more advanced topics on lists and libraries because the first course in this updated series (091095, *Microsoft® SharePoint® Modern Experience: Site Basics*) now covers the basic skills.
- Coverage of Flow has been removed from this course. Microsoft Flow has been rebranded as Power Automate, which is now covered in the first course of this series.
- Coverage of Microsoft Forms has been removed from this course. Power Apps® is a significantly more robust program than Microsoft Forms that grants the creator complete control over data input, presentation, and storage. So, Power Apps is now covered in this course instead of Forms.

General Course Design

This course focuses on multi-site development using a hub site and builds upon basic skills covered in the first course of this series. In course activities, the class works as a team, with the instructor serving as site owner for the Company hub site. Each student creates and customizes their own communication site and their own team site, both of which they then associate with the hub site. The result is a hierarchically constructed intranet that gives students experience working within a relatively complex SharePoint environment. Students practice advanced skills and explore site configuration details that build on the skills covered in the first course. The new lesson sequence reflects these changes.

Content Changes

The following table compares the general outline of the 1.0 and 2.0 editions of the course.

1.0 Course Edition	New 2.0 Course Edition
Lesson 1) Creating and Configuring a New Site Topic A) Create a Site in SharePoint Topic B) Configure Site Look and Layout	Lesson 1: Setting Up a Multi-Site Intranet Topic A) Plan Your Organization's Intranet Topic B) Create and Configure SharePoint Sites
Lesson 2) Creating and Configuring Document Libraries Topic A) Create Document Libraries Topic B) Configure File Versioning and Checkout Topic C) Configure Content Approval	Lesson 2: Connecting Sites to a Hub Topic A) Create a Hub to Connect Multiple Sites Topic B) Apply a Site Template Topic C) Change Site Themes and Navigation
Lesson 3: Creating and Configuring Lists Topic A) Add List Apps to a Site Topic B) Create Custom Lists Topic C) Create Calculated and Validated Columns	Lesson 3: Populating a Site with Content Topic A) Create Custom Page Layouts Topic B) Manage Library Files Topic C) Manage List Data
Lesson 4: Assigning Permissions and Access Rights Topic A) Secure Sites with Permissions Topic B) Secure Apps, Documents, and Files	Lesson 4: Improving List Data Entry and Presentation Topic A) Limit What Users Can Enter Topic B) Create Calculated Columns Topic C) Use Formulas to Validate Entered Data
Lesson 5: Creating and Configuring a Communication Site Topic A) Create a Communication Site Topic B) Configure a Communication Site	Lesson 5: Integrating a Power Apps Application with SharePoint Online Topic A) Create a Power Apps Application Topic B) Modify an App
Lesson 6: Implementing Workflows with Forms and Flow Topic A) Capture Data with Forms Topic B) Store Form Data in SharePoint with Flow Topic C) Automate Business Processes with Forms, Flow, and SharePoint
